```
interface TodoListItem {
  what: string
  when?: Date
  byWho: UUID
}

interface TodoListItemWithUser {
  what: string
  when?: Date
  byWho: User
}

function findTodoListItems(listId: UUID): TodoListItemWithUser[] {
  return callApi<TodoListItem[]>(`/v1/lists/${encodeURIComponent(listId)}/items`)
    .map((item) => ({
      ...item,
      byWho: callApi<User>(`/v1/users/${item.byWho}`),
    }))
}
```

NOPE

Let me just…

```ts
interface TodoListItem {
  what: string
  when?: Date
  byWho: UUID
}

interface TodoListItemWithUser {
  what: string
  when?: Date
  byWho: User
}

function findTodoListItems(listId: UUID): TodoListItemWithUser[] {
  return callApi<TodoListItem[]>(`/v1/lists/${encodeURIComponent(listId)}/items`)
    .map((item) => ({
      ...item,
      byWho: callApi<User>(`/v1/users/${item.byWho}`),
    }))
}
```

NO PE

NO PE

NO PE

Gaah!!

“Can we let users archive lists without deleting them?”
