

```
interface User {  
    id: UUID  
}
```

```
interface TodoListItem {  
    what: string  
    when?: Date  
    byWho: UUID  
}
```

```
function findTodoListItems (listId: UUID) : TodoListItem[] {  
    return callApi<TodoListItem[]>(`/v1/lists/${listId}/items`)  
}
```

```
{(todoListItem && todoListItem.what) ? todoListItem.what.toUpperCase() : null}
```

TypeError: defaultdict: dict item is null

{todoListItem.what.toUpperCase() }

A look at the consumer...

```
interface User {  
  id: UUID  
}
```

```
interface TodoListItem {  
  what: string  
  when?: Date  
  byWho: UUID  
}
```

```
function findTodoListItems(listId: UUID): TodoListItem[] {  
  return callApi<TodoListItem[]>(`/v1/lists/${listId}/items`)  
}
```

```
<li>  
  {(todoListItem && todoListItem.what) ? todoListItem.what.toUpperCase(): null}  
</li>
```

TypeError: todoListItem.what is null

**“Would it be possible to see
who added that list item?”**
